
Marabou Parser
① SLEEC specification
② Read & normalize
• parse spec (SLEEC grammar)
• map measures → NN inputs, output events → NN outputs
• remove “unless” clauses → normalized rules
③ Generate queries
• conditions → input bounds and disjunctions
• negate required output
• one query per normalized rule
Marabou verification queries
① Neural network
④ Marabou verification
• solve each query → sat / unsat / timeout
• combine into a verdict per original rule
⑤ Report & illustration
• verdict per rule
• counterexample with named inputs/outputs
• scene picture (when the setup is known)
